SUMMARY

Software Engineer with 3 years of experience building production Generative AI, RAG, agentic, and multimodal systems, plus cloud infrastructure and backend platforms serving enterprise scale. Skilled across the full lifecycle: model integration, API/microservice architecture, cloud deployment, and CI/CD.

EDUCATION

The LNM Institute of Information Technology (LNMIIT), Jaipur

Jul 2019 – Jul 2023

B.Tech in Computer and Communication Engineering

EXPERIENCE

IBM

Bengaluru, India

Cloud & AI Engineer – watsonx / IBM Cloud ISDL

Nov 2025 – Present

- Built **AI-powered Slack agents** using **RAG, LLMs, and agentic workflows** for automated issue resolution, including automated **Dockerfile validation**, integrated with **watsonx.ai**.
- Developed **watsonx.ai-based productivity tools** integrating **GitHub and Monday.com** for automated work tagging, categorization, and repository/star analysis; deployed via **IBM Cloud Code Engine**.
- Engineered and maintained **IBM Cloud Dreadnought common base images** across UBI, Java, Python, Go, and NGINX; top images exceeded **68K+ pulls**, with several surpassing **30K+ consumptions**.
- Modernized the build system by migrating **Bash to Go** and adopting **Docker Buildx Bake**, cutting build time from **60 to ~30 minutes**.
- Analyzed **Jenkins CI performance via Gantt timelines** to identify bottlenecks; contributed to the **Jenkins-to-Tekton migration** and multi-architecture builds supporting **ARM-based images**.
- Streamlined **UBI9/UBI10 branching**, retired UBI8, and improved **Slack alerting, documentation, and release processes**.
- Paired with **IBM Bob** for code generation and review; collaborated with a **UK-based Scrum team**, owning sprint deliverables and cross-team dependencies.

Samsung Research Institute – Delhi

Delhi, India

AI Software Engineer

Jan 2024 – Oct 2025

- Designed and optimized **Node.js backend APIs** with context-aware search over enterprise images, videos, and media assets, cutting manual lookup time by **35%**.
- Built a **Generative AI template-generation platform** (LangChain, LLMs, smart cropping, scene detection, masking) that produced **4+ templates** in under **16 seconds**, speeding up content creation by **40%**; later migrated it from an on-premise POC to **AWS/Amazon Bedrock**, evaluating foundation models and tuning inference for production.
- Architected modular **Flask/FastAPI microservices** with Docker, PostgreSQL, S3, and LLM integrations, using session pooling and multithreading to lift throughput by **25%**.
- Developed a **text-to-video semantic similarity pipeline** using FAISS, PostgreSQL, scene/frame selection, and multi-modal embeddings, processing **1,000+ videos** with sub-4s average response time.
- Delivered computer vision and generative AI experimentation across **SDXL, image segmentation, and AWS Lambda**-based inference; mentored interns in AI and backend engineering.

Pepcoding Ltd.

Noida (Remote), India

Backend Developer Intern

Jan 2022 – Jun 2022

- Built REST APIs for the **NADOS learning platform** serving **10,000+ weekly users** at **99.9% uptime**; automated workflows with Puppeteer and optimized database queries, cutting server load by **18%**.
- Mentored **50+ students weekly** in DSA and interview preparation, earning a **4.8/5** learner rating.

TECHNICAL SKILLS

AI / GenAI: Generative AI, LLMs, RAG, Agentic AI, MCP, Prompt Engineering, Embeddings, Vector Search, LangChain, watsonx.ai, Hugging Face

Languages: Python, Java, Go, JavaScript, SQL

Backend: FastAPI, Flask, Node.js, REST APIs, Microservices

Cloud / DevOps: IBM Cloud, AWS, Docker, Kubernetes, Jenkins, Tekton, CI/CD, Build Matrix, Amazon Bedrock, S3, SQS, Lambda, Code Engine

Databases / Tools: PostgreSQL, pgvector, FAISS, MongoDB, Git, AI Coding Editors, Automation

PROJECTS

IPL Scraper & Analyzer – automated ESPN data pipelines with advanced statistics. **Python/OpenCV Utilities** – desktop GUI tools and computer vision prototypes. **AI-Powered Document Vault** – RAG-based document search and retrieval. **LangGraph Agentic Workflows** – state-managed multi-agent systems. **File Manager System** – full-stack file management web app.

NOTABLE ACHIEVEMENTS

- **Enterprise Impact:** Engineered and shipped a commercial **Generative AI product at Samsung**, spanning RAG, vector search, multimodal AI, and backend architecture.
- **Certifications:** IBM Containers & Kubernetes Essentials; Samsung Generative AI Levels 1–3; Samsung SWC Advanced & Professional Problem Solving (Top 30%). [View Certifications](#)
- **Technical Proficiency:** Solved **500+ DSA problems** and completed **100+ hours** of upskilling through IBM Learning.
